

FLOWIN® Pro

Important Care Instructions

- 1) DO NOT STORE THE FLOWIN® PRO IN DIRECT SUNLIGHT (SUCH AS OUTSIDE OR NEAR WINDOWS) OR NEAR HEAT SOURCES. Direct sunlight or excessive heat (like the high temperatures that can occur in the trunk of a car) can cause the plate to deform. Though the product can continue to be used, deformation may cause the original friction and functionality to change.
- 2) Do Not store your FLOWIN® Pro in a hot vehicle.
- 3) Avoid contacting the FLOWIN® Pro gliding surfaces with sharp or abrasive objects (such as sand). Sharp or abrasive objects may cause structural changes to the surface of the plate. Always use the FLOWIN® Pro in a clean environment and with clean shoes.
- 4) If necessary clean the surface of the plate with denatured alcohol.
- 5) When not in use store the plate on a flat surface or on the FLOWIN® Storage Cart or FLOWIN® Wall Rack.
- 6) Refer to the Manual for further safety instructions.
